FIXED PROBLEMS
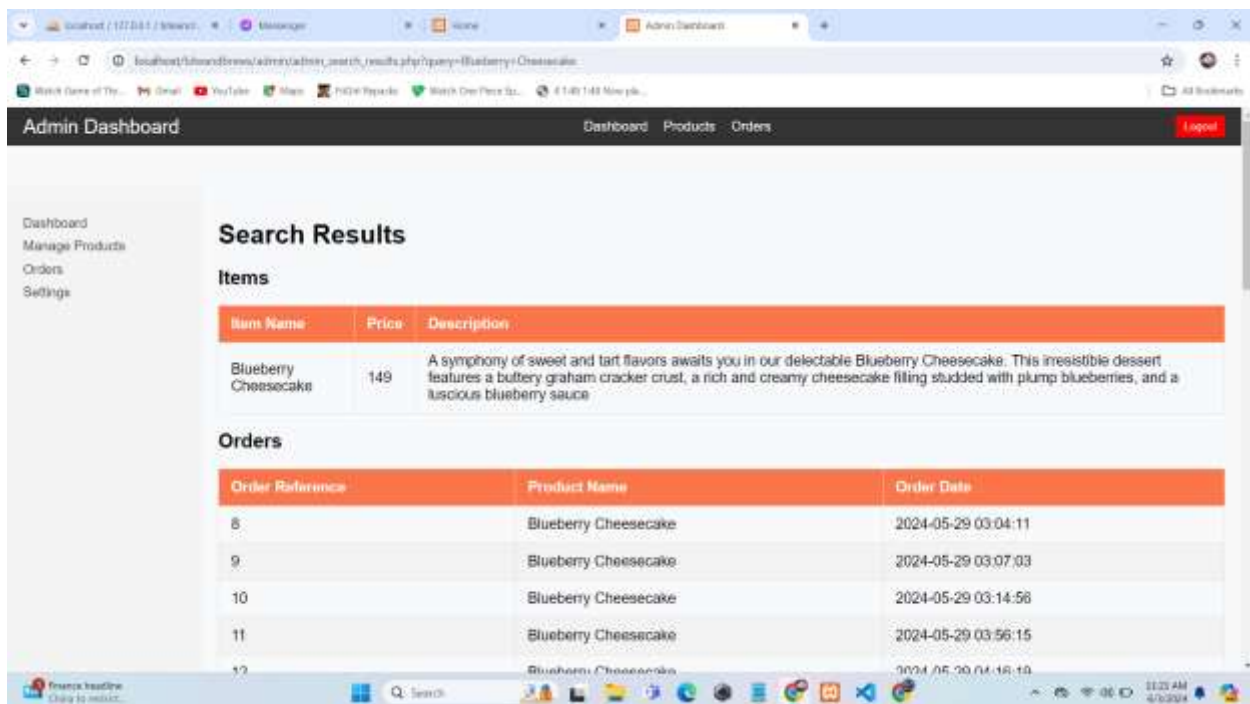

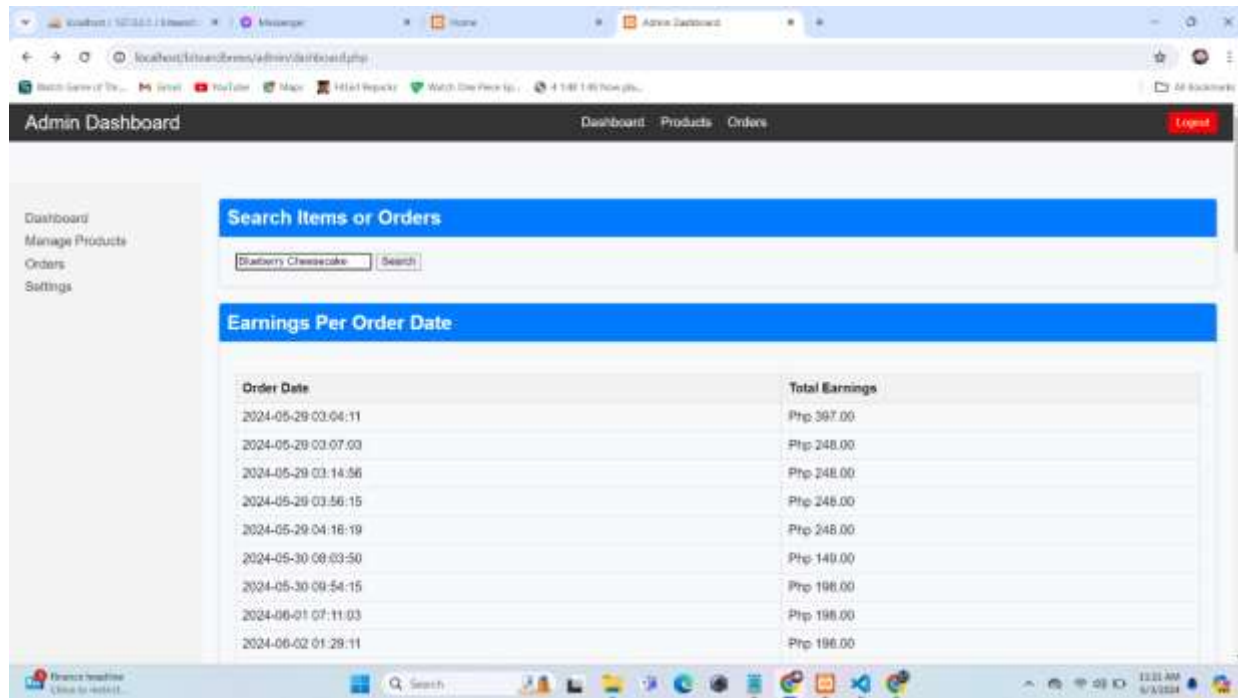

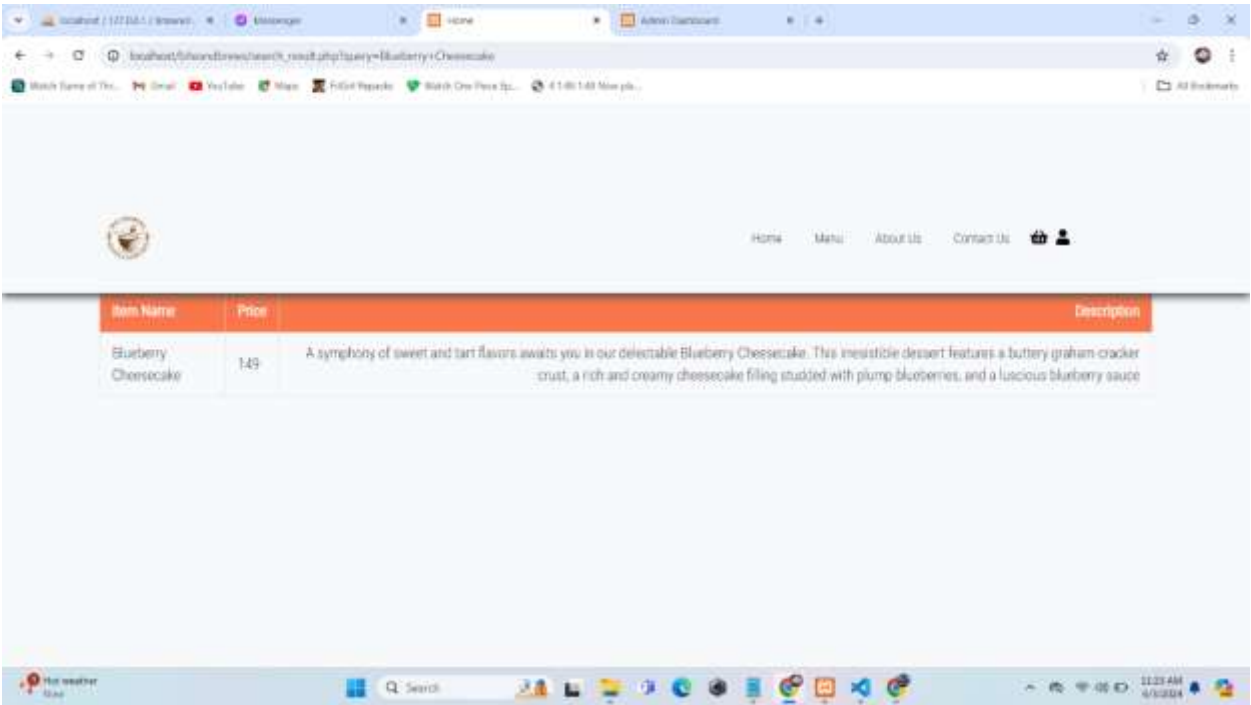

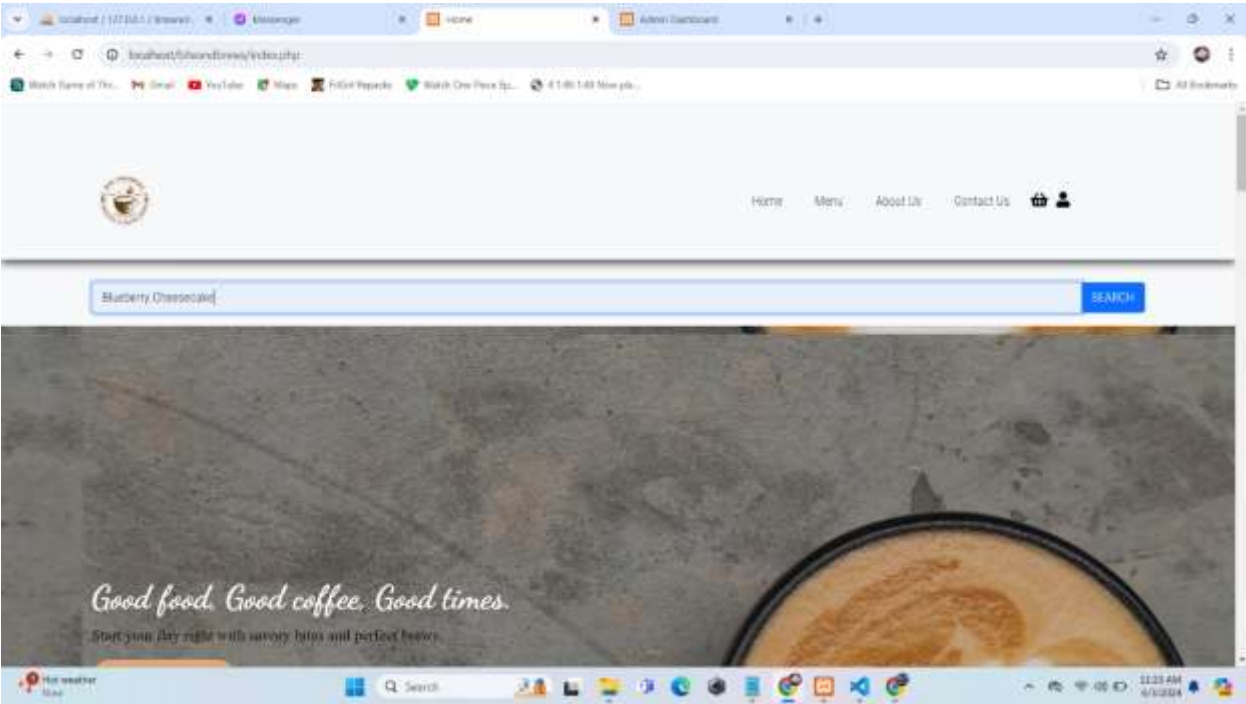

1.Add an optimized Search Bar for items and for Orders, where in it will display the item or order information that is being described in the search.do this in both Client and Admin. it should also accept order reference number as search string to display the order information.
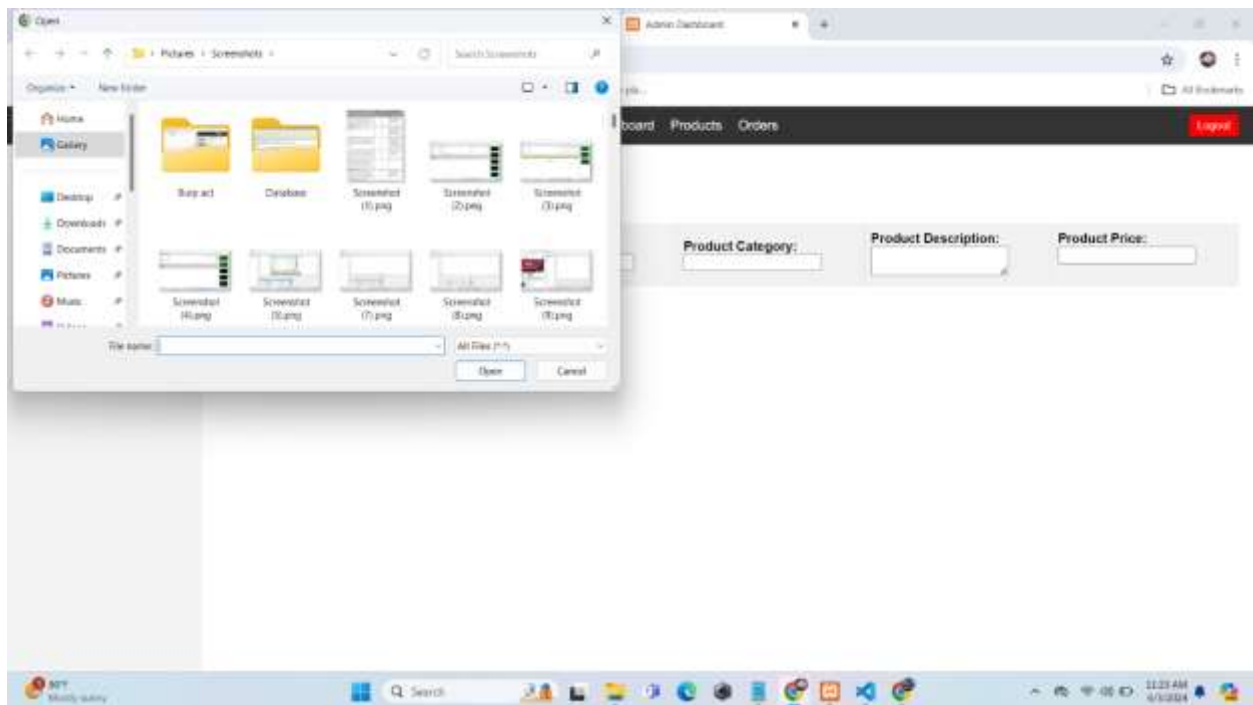

Admin:

Client:

2.when inserting and updating items, admin must be able to do the uploading of images to the record.
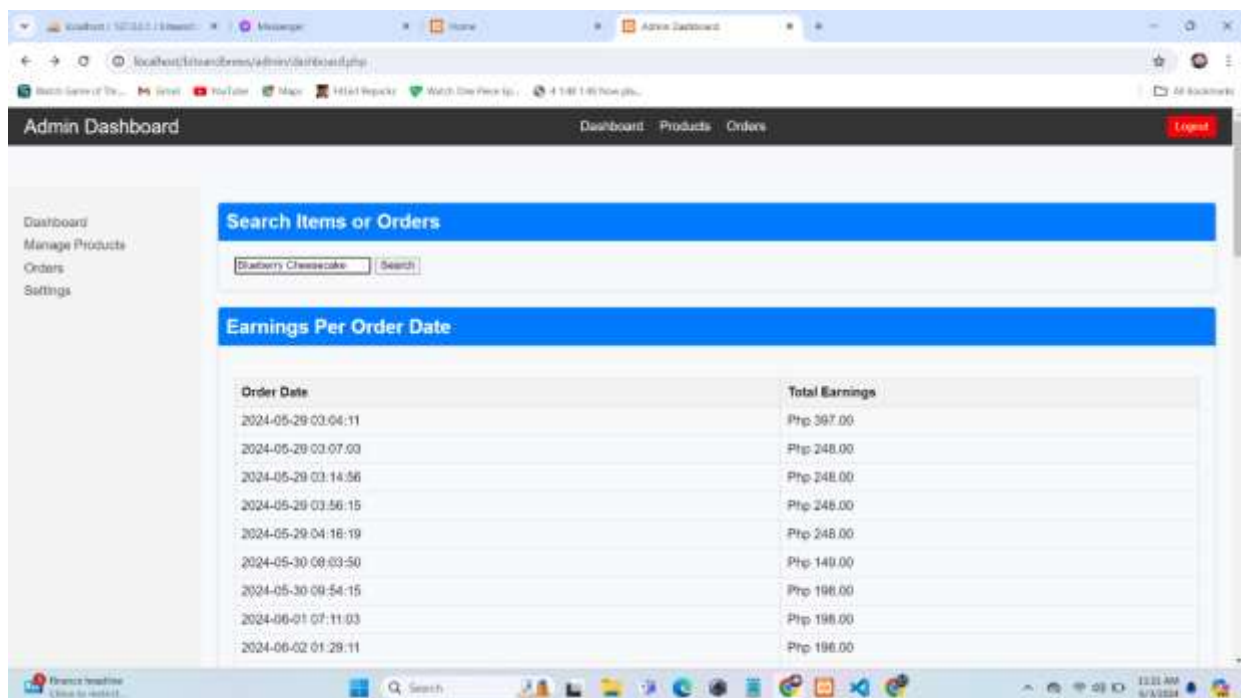

3.Order List should display the user's information and not the user_id, also it should display the item

4.Make the Sales Dashboard operational
